Episode Tracker

National Illicit Drug Strategy Program (NIDS) - Client Counselling and Episode Reporting.

Are you tired of using paper based recording to track client episodes for NIDS reporting? Sick of spending hundreds of person hours to collate data for 6 and 12 month cessation and consolidation reports?

Episode Tracker is an **easy to use** software program that will help you manage your day to day drug counselling and recording of client details. In addition, Episode Tracker utilises this stored client information and collates NMDS reports in a fraction of the time it takes to complete them manually. An example Episode Tracker main screen shot is shown below.

Features of Episode Tracker include:

- 30 day (limited) single machine install trial version of Episode Tracker for evaluation by organizations.
- Simple interface for recording of client details, episodes and session details.
- Reports for cessation of treatment and consolidation reporting for NIDS.
- Capability to add new clients and modify existing client details and records.
- Login and Password access to client data to assist with client confidentiality (it is advised to combined Episode Tracker login security with file and folder level security)
- Backup (available only in the registered version of Episode Tracker) of the client data to either local or network based locations (network backup requires a pre existing network and client software)

For a **FREE 30 day evaluation copy** of Episode Tracker, check us out at:
